

InteliVision

InteliVision is a new generation display unit for either InteliGen^{NT} / InteliSys^{NT} or InteliDrive controllers. It is designed as a simple, easy to use Plug and Play solution and has been developed from our original IS-Display.

A view into the future...

- Large, high-resolution screen
- Colour TFT display
- TRENDS monitoring screen
- Simpler, faster and more intuitive control
- More information in less time
- Same dimensions as IS-Display (InteliSys^{NT})
- IS-NT-BB can be mounted to the rear side of InteliVision
- Plug and Play operation (auto configuration based on controller application)
- Universal solution for both controller families – IGS-NT and ID
- Direct connection to the controller (converters are not needed)

TRENDS MONITORING SCREEN
TRENDS monitoring is the new standard feature that helps you to evaluate past events easily on one screen.

INFORMATION SCREEN
Highly visible controller information screen displays promotional InteliVision face.

ENGINE MEASUREMENT SCREEN
The InteliVision default screen is set to show the main engine measurements such as engine speed and actual power.

ALARM LIST SCREEN
The alarm list screen displays all relevant controller and ECU alarms clearly and simply.
